Assessment for Matthew Christensen

Preparation – were they prepared during team meetings?

We did not hold scheduled meetings since we live in the same apartment. Still, whenever we sat down to work or discussed the project Matt knew what needed to be done and where his work was at.

Contribution – did they contribute productively to the team discussion and work?

Matt, at several points, picked up slack for this project when I had other pressing assignments. In turn, I alleviated him when he had other pressing assignments. Matt took charge of data scraping and the left half of our project (Pokemon cards and summarization cards). Matt has great domain knowledge, which was essential in catching data errors and understanding how to summarize Pokemon teams.

Respect for others' ideas – did they encourage others to contribute their ideas?

Matt is a great person to bounce ideas off of. If he disliked a suggestion of mine, he would propose an alternative or work with my idea until we both agreed it was awesome.

Flexibility – were they flexible when disagreements occurred?

I can't remember a single disagreement

Self-Assessment

Preparation

We did not hold scheduled meetings, since we live in the same apartment. When we worked or discussed, I knew the status of our project and what I needed to do. We kept fairly git-synced, so we always knew what the other's code status was.

Contribution

Matt and I alternated bursts of work, such that we alleviated one another when one of us had other pressing assignments. I took charge of image scraping, map annotation, the right side of the visualization (map view and table), and integration between our views. The map annotation was especially rough.

Respect for others' ideas

I enjoyed bouncing ideas back and forth, and I think I was good at drawing out specifics for Matt's ideas. While Matt has been playing Pokemon his whole life, I only started this month. I think this gave me a valuable "noob" perspective.

Flexibility

Again, I can't remember any disagreements.
